

Business Requirements Specification

Farmwell Farm Management System

Business / product	FARMWELL AGTECH SOLUTIONS / farmwell.app
Purpose	Draft BRS for a multi-tenant farm management and investor transparency SaaS web application.
Prepared by	Aminu Hussain
Version	0.1 - Draft for validation
Date	May 23, 2026
Pilot context	MDSexclusive Farms and family-backed farm operations are used as discovery inputs, but Farmwell is intended for the broader farm/investor market.
Source inputs	Activity Log.xlsx, MDSexclusive Farms 2026 Plan.doc, Farm Investment Proposal PDF, WhatsApp updates, and supplied farm/nursery photos.

Document note

This BRS converts a real farm investment and operations workflow into software requirements. It is not legal, tax, or investment advice. Farmwell is currently scoped to track off-platform funding and payouts, not collect, hold, or disburse money inside the platform.

1. Executive Summary

Farmwell is intended to be a multi-tenant farm management and investor transparency SaaS platform for the broader agricultural market, not only one family farm. The immediate inspiration is a family-backed farm where updates currently move through WhatsApp messages, photos, PDF proposals, Word plans, and Excel activity logs. The system should turn those fragmented updates into one controlled record of what is planned, what was funded, what was done, what was spent, what was harvested, what was sold, and what investors are owed.

The platform should help farm owners and managers run all farm types day-to-day while giving investors a clear view of how their funds are being used. A farmer should be able to keep a diary or journal with photos, activities, costs, labour, inputs, plots or production units, production cycles, risks, harvests or production output, and sales. An investor should be able to view fund releases, budget versus actual spend, approved evidence of completed work, expected returns, capital recovery, and configurable profit-sharing calculations.

Core business idea

Farmwell should become the trusted operating record for farm work and farm investment: a shared system where farm activity is logged at source and investor confidence is built through timely, evidence-backed transparency.

2. Background and Business Context

The source farm plan covers a 2026 wet-season operation with Farm 1 planned as 1 acre of maize intercropped with pepper and eggplant, and Farm 2 planned as half an acre of rice. The accompanying

proposal uses a capital-first investment model: investor funds are recovered first from sales, then profit is shared according to an agreed formula. The WhatsApp exchange also shows real operational change: because neighbouring farms planned maize before rice, the farmer proposed planting maize first to reduce bird and rodent pressure, then raising rice nursery later for transplanting around the first week of August.

These inputs show the exact software problem: farm work changes quickly, decisions are context-sensitive, and investors need enough visibility to understand why money is being spent or why a cultivation plan changed. The system must preserve both structured records and narrative context.

2.1 Source Facts Captured

Source	Key information reflected in requirements
Farm plan	Farm 1: maize, pepper, eggplant on 1 acre. Farm 2: half-acre rice plan. Planned input cost: NGN 606,500. Expected combined profit range: about NGN 801,000 to NGN 1,681,000 based on plan assumptions.
Investment proposal	Capital-first model, staged funding, investor recovery before profit split, initial 40/60 proposal, and requested adjustment to 30/70 from chat context. Product direction is capital-first with configurable split per agreement.
Activity log	2026 wet-season activity log with Phase 1 land preparation. Budgeted NGN 150,000, spent NGN 144,000, balance NGN 6,000. Entries include herbicide, clearing/spraying, tilling Farm 1 and Farm 2, knapsack sprayer, tools, transport and feeding.
WhatsApp updates	Clearing completed, burn-off completed, harrowing/tilling in progress, planting readiness, decision change from immediate rice to maize first then rice after maize harvest.
Photos	Evidence of cleared land, burning of clearings, tilled plots, Farm 2, and pepper/eggplant nursery under netting.

2.2 Confirmed Product Decisions

Decision area	Confirmed direction
Market scope	Farmwell is a SaaS product for the broader market, supporting many farms, farm organizations, managers, and investors.
Money movement	Farmwell will track external bank transfers/manual payments and payout records. It will not collect, hold, or disburse funds inside the platform for MVP.
Investor visibility	Default to approved expense-level transparency: investors see approved categories, amounts, receipts/photos, activity summaries, material plan changes, harvest/sales, capital recovery, and profit-share calculations for their own investments only.
Private records	Investors should not see internal private notes, draft or unapproved expenses, other investors' records, sensitive bank/personal details, or messy operational conversations.
Profit model	Use a capital-first model by default, then apply a configurable profit split per investment agreement.
WhatsApp updates	Farmers should be able to submit or forward updates through WhatsApp, in addition to mobile web entry.
Evidence	Normal photo uploads are sufficient for MVP. Geotagging, anti-tamper checks, and forced timestamp verification can come later.
Farm types	The product should support all farm types over time: crop, livestock, poultry, aquaculture, mixed farms, and plantations.

Decision area	Confirmed direction
Approvals	Use role- and threshold-based approvals. Farm owner/admin approves routine in-budget spend; investor approval is required for fund releases, major expenses, material overruns, major plan changes, and final profit distribution.
Reports	Formal investor and farm management reports are required, not only dashboard views.
Product positioning	Position Farmwell as farm management and investor transparency software for many farms, under FARMWELL AGTECH SOLUTIONS.

3. Business Objectives

ID	Priority	Business requirement
BO-01	Must	Provide a single digital record for farms, plots/production units, crop or farm production cycles, activities, expenses, evidence, funding, harvest/output, sales, and investor returns.
BO-02	Must	Improve investor trust by showing how released funds are used, supported by receipts, photos, notes, activity logs, and budget variance tracking.
BO-03	Must	Help farmers manage daily work through a mobile-friendly farm diary, task calendar, activity journal, input tracking, and next-action reminders.
BO-04	Must	Support phased funding so investors can release capital only after prior milestones or field activities are confirmed.
BO-05	Must	Calculate capital recovery, profit, loss, and profit sharing according to configurable investment agreements.
BO-06	Should	Provide farm owners with dashboards for operational performance, production progress, spending, output forecast, sales, and cash position.
BO-07	Must	Operate as a multi-tenant SaaS product that can serve many farms, farm managers, investors, cooperatives, and agribusiness partners.
BO-08	Could	Use AI-supported summaries to convert field notes, WhatsApp-like updates, and activity logs into investor-friendly progress reports.

4. Scope

4.1 In Scope

- Multi-tenant SaaS account setup for multiple farm businesses and investor groups.
- Farm, plot, field, production-unit, and production-cycle setup.
- Support for crop farms, livestock, poultry, aquaculture, mixed farms, and plantations through configurable farm types and production cycles.
- Farm diary/journal with activities, photos, videos, notes, location, weather notes, and next activity.
- Budget planning, phased funding, expenses, receipts, and budget-versus-actual tracking.
- Investor onboarding, investment agreements, fund release requests, capital recovery, and profit-share tracking.
- Input inventory including seeds, fertilizer, herbicide, insecticide, tools, equipment, fuel, and consumables.

- Labour and contractor activity recording, including self labour, hired labour, feeding, transport, and service costs.
- Task calendar for clearing, burning, plowing/tilling/harrowing, planting, transplanting, spraying, weeding, fertilizing, harvesting, threshing, and sales.
- Harvest, storage, produce sales, buyer records, sales proceeds, and distribution of proceeds.
- Management dashboard and investor portal.
- Notifications for upcoming tasks, funding approvals, missing receipts, overspending, delayed activities, and investor updates.
- Document and evidence storage for proposals, farm plans, activity logs, receipts, photos, agreements, and reports.

4.2 Out of Scope for MVP

- IoT sensors, drone mapping, satellite imagery, and automated crop disease detection unless added in a later phase.
- In-platform collection, escrow, wallet, or disbursement of investor funds; MVP will track off-platform transfers and proofs only.
- Regulated public investment marketplace features until legal and compliance requirements are confirmed.
- Government subsidy, insurance, tax, and formal accounting integrations beyond exportable reports.
- Guaranteed yield or investment return predictions; the system should show scenarios and actuals, not promise outcomes.
- Marketplace logistics and delivery management beyond recording buyers, sales, and proceeds.

5. Stakeholders and User Groups

User group	Primary needs
Farm owner	Create farms, approve plans, monitor performance, invite managers and investors, review profit/loss.
Farm organization admin	Manage the tenant account, users, farms, roles, investor access, subscription, and organization-wide reporting.
Farm manager / farmer	Record activities, request funds, upload evidence, manage tasks, track inputs, report issues and harvests.
Investor	View approved fund usage, project status, activity evidence, expected returns, capital recovery, profit share, and formal reports.
Operations/log keeper	Maintain diaries, enter historical records, organize photos, and clean up activity data.
Finance/admin	Approve expenses, reconcile receipts, track budget, record sales, calculate distributions.
Agronomist/advisor	Review production plans, risks, pest/disease or animal-health notes, recommended actions, and activity history.
Buyer/customer	Optional future user who can be recorded against sales, commodity commitments, payments, and delivery notes.

User group	Primary needs
Platform administrator	Manage subscriptions, tenant accounts, roles, configuration, support, and system-level audit logs.

6. Target Business Process

1. Farm organization creates a tenant account, then creates farm profiles with business name, location, farm contacts, production units, farm seasons, and user roles.
2. Farmer creates a production plan with units, commodities, timeline, required inputs, expected activities, estimated costs, expected outputs, and risk assumptions.
3. Investor reviews the proposal, agrees to a capital-first configurable profit-share model, and transfers funds externally in full or by approved phases.
4. Farm manager logs daily or weekly activities through mobile web or WhatsApp with date, production unit, commodity, activity type, cost, labour, inputs used, remarks, next activity, and photo or receipt evidence.
5. The system compares actual spend to budget and flags variances, missing receipts, delayed tasks, and activities that require approval.
6. Investor receives an approved transparency feed showing what was done, what approved spend was recorded, what evidence was attached, and what remains in each funding phase.
7. Harvest/output and sales are recorded with quantity, buyer, price, deductions, proceeds, and commodity movement.
8. The system calculates capital recovery, remaining unrecovered capital, profit/loss, and profit-share distribution according to the investment agreement.
9. Season-end report is generated for farm owner, farmer, investors, and management review.

7. Functional Requirements

7.1 Farm, Production Unit, and Production-Cycle Management

ID	Priority	Business requirement
FR-FRM-01	Must	Allow organizations to create farms with business name, owner, farm type, location, contact details, notes, registration details, and farm photos.
FR-FRM-02	Must	Allow farms to contain plots, fields, pens, ponds, houses, or other production units with name, size/capacity, suitability, status, and optional map/GPS references.
FR-FRM-03	Must	Allow users to create production cycles by farm, unit, season, farm type, commodity, start date, expected output/harvest date, and production method.
FR-FRM-04	Must	Support all farm types through configurable templates, including crop, livestock, poultry, aquaculture, mixed farms, and plantations.
FR-FRM-05	Must	Support mixed cultivation and intercropping, including maize with pepper and eggplant on the same plot.
FR-FRM-06	Should	Allow plan changes with reason, date, approver, impact on budget, impact on expected output, and investor notification.

ID	Priority	Business requirement
FR-FRM-07	Should	Maintain a season or production timeline showing planned, completed, delayed, skipped, and changed activities.

7.2 Farm Diary, Journal, and Evidence Capture

ID	Priority	Business requirement
FR-DIA-01	Must	Provide a farm diary where users can log crop activities such as clearing, harrowing, planting, spraying, weeding, harvesting, and sales, as well as farm-type activities such as feeding, vaccination, stocking, water-quality checks, breeding, and mortality records.
FR-DIA-02	Must	Each diary entry must support date, farm, production unit, production cycle, commodity, activity type, description, inputs used, labour used, cost, remarks, next activity, and status.
FR-DIA-03	Must	Allow photo, video, receipt, invoice, and document attachments to be linked to diary entries.
FR-DIA-04	Must	Allow activity entries to be tagged as planned, in progress, completed, delayed, blocked, or changed.
FR-DIA-05	Must	Support WhatsApp-based updates so farmers can submit or forward activity notes and photos through WhatsApp, with admin review before they become official records.
FR-DIA-06	Should	Support voice-to-text or quick mobile entry for farmers who prefer sending short field updates.
FR-DIA-07	Should	Allow investor-safe summaries, where sensitive internal notes can be separated from updates visible to investors.

7.3 Budget, Funding, and Expense Management

ID	Priority	Business requirement
FR-FIN-01	Must	Create a farm-season or production-cycle budget with categories such as tools, seeds/stock, land preparation, herbicides, planting, labour, feeding, health care, fertilizers, pest control, harvest/output handling, transport, and contingency.
FR-FIN-02	Must	Support phased funding with budgets, requested amount, approved amount, externally transferred/released amount, spent amount, balance, status, and supporting evidence.
FR-FIN-03	Must	Record expenses against activity, phase, category, vendor, payment method, amount, receipt, approver, and whether the expense is investor-visible.
FR-FIN-04	Must	Show budget versus actual spend at farm, production cycle, production unit, phase, and category level.
FR-FIN-05	Must	Track off-platform money movement using transfer proof, bank reference, payer/payee, amount, date, status, and reconciliation note; Farmwell must not process or hold funds in MVP.
FR-FIN-06	Must	Allow role- and threshold-based approval of fund release requests, major expenses, budget overruns, and plan changes.
FR-FIN-07	Should	Support carry-forward balances between phases, such as a Phase 1 budget balance moving into Phase 2.
FR-FIN-08	Should	Support configurable currency, with NGN as the initial default.

7.4 Investor Portal and Investment Agreements

ID	Priority	Business requirement
FR-INV-01	Must	Allow investors to view only the farms, seasons, agreements, updates, and financial records they are permitted to access.
FR-INV-02	Must	Capture investment agreement terms including investor, farm, season, amount committed, amount funded, capital recovery rule, profit split, role responsibilities, and notes.
FR-INV-03	Must	Support capital-first recovery, where sales proceeds first recover investor capital before profit sharing is calculated.
FR-INV-04	Must	Support configurable profit-sharing formulas, including examples such as 40/60 and 30/70 after capital recovery.
FR-INV-05	Must	Display fund usage by phase, including externally released funds, approved expenses, balance, approved evidence, and completion status.
FR-INV-06	Must	Use approved expense-level transparency as the default investor visibility model: investors see category, amount, status, receipt/photo evidence where approved, and summaries for their own investment.
FR-INV-07	Must	Hide internal private notes, unrelated farm records, unapproved drafts, sensitive bank/personal details, and records belonging to other investors or farms.
FR-INV-08	Should	Provide investor progress reports showing planned versus actual spend, field activity evidence, farm production status, risks, expected output, sales, and projected returns.
FR-INV-09	Should	Allow investor comments or questions on updates, expenses, and milestone completion.

7.5 Approval and Governance Workflow

ID	Priority	Business requirement
FR-APP-01	Must	Allow each farm organization to configure approval thresholds by amount, category, phase, farm type, and investment agreement.
FR-APP-02	Must	Require investor approval for funding releases, material budget overruns, major plan changes, and any expense category marked investor-approval-required.
FR-APP-03	Must	Allow farm owner/admin approval for routine day-to-day expenses that are within approved budget and below configured threshold.
FR-APP-04	Must	Allow finance/admin users to reconcile external transfer proofs, receipts, sales proceeds, and payout records.
FR-APP-05	Must	Require investor review or acknowledgement before final profit distribution is marked complete.
FR-APP-06	Should	Allow approval delegation, escalation, and clarification requests so farm work is not blocked by unavailable approvers.

7.6 Inputs, Inventory, and Assets

ID	Priority	Business requirement
FR-INVTRY-01	Must	Track farm inputs such as seeds, herbicides, pre-emergence chemicals, fertilizers, insecticides, fungicides, foliar spray, nets, sacks, and fuel.
FR-INVTRY-02	Must	Track tools and equipment such as hoes, cutlasses, knapsack sprayers, pumps, hoses, nets, and machinery hire.
FR-INVTRY-03	Must	Record purchase quantity, unit cost, total cost, supplier, purchase date, storage location, and linked receipt.

ID	Priority	Business requirement
FR-INVTRY-04	Should	Reduce stock when inputs are used in an activity entry and show remaining stock balance.
FR-INVTRY-05	Could	Support low-stock alerts and reorder suggestions based on upcoming planned activities.

7.7 Task Calendar and Reminders

ID	Priority	Business requirement
FR-TASK-01	Must	Generate a farm task calendar from the production plan and allow manual tasks to be added.
FR-TASK-02	Must	Support reminders for time-sensitive activities such as planting windows, transplanting, fertilizer application, spraying intervals, feeding schedules, vaccination, pond checks, weeding, and harvest/output readiness.
FR-TASK-03	Should	Flag delayed tasks and require a reason when a planned activity is moved, cancelled, or replaced.
FR-TASK-04	Should	Show next activity on the farm dashboard and investor progress view.

7.8 Risk, Issues, and Decision Logs

ID	Priority	Business requirement
FR-RISK-01	Must	Allow users to record operational risks such as birds, rodents, pests, rainfall delay, input price increase, labour shortage, theft, disease, flooding, market price changes, and buyer default.
FR-RISK-02	Must	Link plan changes to risk reasons, such as changing Farm 2 from rice-first to maize-first because neighbouring farms planted maize and rice would face bird/rodent pressure alone.
FR-RISK-03	Should	Allow each risk to have severity, probability, owner, mitigation, due date, status, and impact on budget or timeline.
FR-RISK-04	Should	Notify investors when a material change affects the production plan, spending, timeline, or expected return.

7.9 Harvest, Sales, and Distribution

ID	Priority	Business requirement
FR-HAR-01	Must	Record harvest or production-output events by farm type, commodity, production unit, date, quantity, unit, quality notes, labour cost, and evidence.
FR-HAR-02	Must	Record commodity or production-output sales with buyer, quantity, unit price, gross amount, deductions, payment status, and receipt/payment evidence.
FR-HAR-03	Must	Calculate capital recovered, unrecovered capital, gross profit, net profit, and profit-share distribution after sales are recorded.
FR-HAR-04	Should	Support recurring harvest crops such as pepper and eggplant with weekly harvest entries over several months.
FR-HAR-05	Should	Support different harvest stages for crops such as rice: cutting, gathering, threshing, bagging, and sale.

7.10 Reports and Dashboards

ID	Priority	Business requirement
FR-RPT-01	Must	Provide a farm owner dashboard with farm status, production cycles, current phase, activities, budget, actual spend, balance, harvest/output status, and expected returns.
FR-RPT-02	Must	Provide an investor dashboard with committed capital, released capital, spent funds, remaining balance, evidence feed, capital recovery status, and expected profit share.
FR-RPT-03	Must	Generate farm activity reports by date range, farm, commodity, production unit, phase, and activity type.
FR-RPT-04	Must	Generate financial reports for budget, actual spend, variance, fund release, harvest revenue, sales, profit/loss, and distribution.
FR-RPT-05	Must	Generate formal investor reports for a selected period, farm, agreement, or funding phase.
FR-RPT-06	Should	Export reports to PDF and Excel for investor review, accounting, and offline sharing.
FR-RPT-07	Could	Generate automatic weekly investor summaries using diary entries, photos, expenses, and upcoming activities.

8. Reporting Requirements

Report	Purpose	Key fields
Farm activity log	Replace spreadsheet/manual logs with a searchable operational record.	Date, farm, production unit, commodity, activity, input, cost, remark, next activity, evidence.
Funding phase report	Show staged capital release and milestone completion.	Phase, budget, approved, externally released, spent, balance, status, evidence, approver.
Budget variance report	Expose where actual spending differs from plan.	Category, budget, actual, variance, reason, linked activity.
Investor fund usage report	Give investors approved expense-level visibility into how their money was used.	Investor, agreement, external funds released, approved expense categories, receipts, photos, balance.
Production progress report	Show planned versus actual production-cycle progress.	Commodity, production unit, planned date, actual date, status, delay reason, next step.
Risk and issue report	Track material risks and plan changes.	Risk, severity, probability, mitigation, owner, status, investor notification.
Harvest and sales report	Track output and revenue by commodity.	Commodity, quantity, unit, buyer, price, gross sales, deductions, net sales.
Profit distribution report	Calculate investor and farmer returns.	Capital invested, capital recovered, net profit, split formula, payable amounts.
Formal investor statement	Provide a shareable report suitable for investor review and recordkeeping.	Opening balance, funds released, approved spend, evidence summary, harvest/output, sales, capital recovery, profit share, closing position.

9. Initial Data Model

Data object	Minimum required fields
Tenant / organization	Business name, CAC/reg details, subscription plan, owner, users, roles, settings, farms.
Farm	Name, owner, business/reg details, farm type, location, contacts, description, photos, status.

Data object	Minimum required fields
Production unit	Farm, type, name, size/capacity, notes, production history, current status, GPS/map reference.
Production cycle	Farm, production unit, season, commodity, planned dates, actual dates, budget, status, expected output.
Activity diary	Date, activity type, production unit, production cycle, description, inputs, labour, cost, remark, next activity, evidence.
Budget	Farm, season, category, planned amount, phase, notes, assumptions, approval status.
Expense	Date, category, activity, amount, vendor, payment method, receipt, approver, investor visibility.
Funding phase	Phase name, budget, requested, externally released, spent, balance, status, milestone, evidence.
Investor agreement	Investor, farm/season, amount, funding model, capital recovery rule, profit split, start/end, status.
Approval	Request type, requester, approver, threshold, status, comment, approved amount, timestamp.
Harvest/output	Date, commodity, production unit, quantity, unit, quality, labour cost, storage/sale status.
Sale	Buyer, commodity, quantity, price, gross, deductions, payment status, proof, linked harvest/output.
Distribution	Agreement, capital recovered, net profit, split formula, investor share, farmer share, payout status.
Evidence	File type, file, caption, date, uploader, linked activity/expense/harvest, visibility.

10. Non-Functional Requirements

ID	Priority	Business requirement
NFR-01	Must	The web app must be mobile-first because farm updates are most likely captured from phones in the field.
NFR-02	Must	The system must support low-bandwidth usage, compressed media uploads, and reliable saving of field records.
NFR-03	Must	The system must enforce role-based access so investors cannot see unrelated farms or private internal records.
NFR-04	Must	Every financial, approval, agreement, and activity-status change must be auditable with user, timestamp, old value, new value, and reason where applicable.
NFR-05	Must	Sensitive investor, financial, identity, and farm-location data must be protected through HTTPS, secure authentication, database access controls, and backups.
NFR-06	Should	The platform should support offline-friendly drafts or resilient retry for rural field conditions, especially for diary entries and media uploads.
NFR-07	Should	The system should support English first, with Hausa or other Nigerian language support considered later if farmer adoption requires it.
NFR-08	Should	The interface should make investor views clear and simple, avoiding technical farm jargon where summary language is more useful.
NFR-09	Must	The application must support multi-tenant separation so one farm organization cannot access another organization's records.
NFR-10	Could	The architecture should allow future native mobile apps, compliant payment/wallet integrations, geotagging, marketplace, insurance, and advisory integrations after legal review.

11. Integrations

Integration	Need	MVP position
Email	Account setup, investor invitations, reports, password reset, weekly summaries.	Recommended for MVP.
WhatsApp	Farmers should be able to submit or forward updates and photos through WhatsApp, and investors may receive update summaries.	Required capability; MVP can start with WhatsApp Business/API-assisted intake or an admin-reviewed forwarding workflow.
Cloud storage/media	Photos, videos, receipts, agreements, and farm evidence must be stored securely.	Required for MVP.
Payments/bank transfer	Investor funding and payouts are tracked as external transfers with evidence and reconciliation notes.	Tracking only in MVP; no in-platform money collection, escrow, wallet, or disbursement.
Weather API	Weather-based reminders and rainfall context for planting/spraying decisions.	Phase 2 unless easy to add.
Maps/GPS	Farm/plot location, geotagged evidence, and field boundary mapping.	Basic GPS optional in MVP; mapping later.
Accounting/export	Export financial records for tax/accounting or external bookkeeping.	CSV/XLSX/PDF export in MVP.
AI summary	Turn diary entries and photos into plain-language investor updates.	Optional phase 2/3 feature.

12. Key Business Rules

- A farm season must have at least one production cycle before expenses, activities, and harvest/output can be fully reported.
- Each funding phase should have a planned budget and milestone definition before funds are requested.
- Investors should see approved released funds, approved spend, balance, evidence, and status for their own investment only.
- Investors should not see internal private notes, unapproved drafts, unrelated farms, sensitive bank/personal details, or records belonging to other investors.
- Routine in-budget expenses should be approved by farm owner/admin or finance/admin; investors should approve fund releases, material overruns, major plan changes, threshold-defined expenses, and final profit distribution.
- Plan changes should capture the reason and impact before being shown as an approved new plan.
- Capital-first agreements should allocate sales proceeds to capital recovery before profit-share calculations.
- Profit sharing must be configurable per agreement; examples include 40/60 and 30/70 after capital recovery.
- Photos and receipts should be linked to the exact activity, expense, harvest, or sale they support.

- Deleted or edited financial records must remain auditable; the system should not silently erase history.

13. MVP Recommendation

Phase	Recommended scope	Outcome
Phase 1: SaaS operating record	Multi-tenant account setup, farm/production-unit setup, production-cycle setup, diary entries, activity log, photo/receipt uploads, budget categories, expenses, task calendar, WhatsApp update intake, and basic dashboard.	Farmwell replaces WhatsApp-only updates and spreadsheet-only activity tracking with one reliable operating record across different farm types.
Phase 2: Investor transparency	Investor accounts, agreements, phased funding, role/threshold approvals, fund usage dashboard, budget variance, formal investor reports, capital recovery and configurable profit-share calculations.	Investors can see approved fund usage and understand how returns are calculated without micromanaging routine farm work.
Phase 3: Growth and intelligence	AI progress reports, richer WhatsApp automation, weather reminders, geotagged evidence, mobile app/offline mode, marketplace/buyer records, advisor workflows.	Farmwell becomes scalable for many farm organizations, investors, and agribusiness partners.

14. Acceptance Criteria

- A farm organization can create Farmwell tenant records, farms, production units, production cycles, budgets, and user roles.
- A farmer can record an activity with date, production unit, commodity, cost, remark, next activity, and photo/receipt evidence from a mobile device.
- The system can reproduce an activity log similar to the provided 2026 wet-season log, including phase totals, spent amount, and balance.
- A farm manager can request phase funding and attach milestone evidence.
- An investor can view approved released funds, approved actual spend, balance, receipts/photos, production progress, and next planned activity.
- A farmer can submit a field update through WhatsApp, and an authorized admin can review and convert it into an official activity record.
- A plan change can be logged with reason, impact, and investor-visible explanation.
- Harvest/output and sales can be recorded by commodity, quantity, buyer, amount, and evidence.
- The system can calculate capital recovery and profit sharing from sales proceeds based on the configured agreement.
- Management can export farm activity, budget, investor, harvest/output, sales, and distribution reports.
- The system can generate a formal investor report for a selected period or funding phase.
- Financial edits, approvals, and deletion attempts are captured in an audit log.

15. Assumptions and Open Questions

Area	Question / assumption to validate
Brand and legal	Confirm official product naming, CAC details, logo, address, and whether the platform should expose FARMWELL AGTECH SOLUTIONS as the operating company.
Pilot farm	Confirm whether MDSxclusive Farms should be the first tenant/client record inside Farmwell and whether its historical records should be imported.
Legal/compliance	Because Farmwell is for the broader market, confirm whether it will merely manage existing private farm-investor relationships or publicly advertise investment opportunities.
Approval thresholds	Confirm default naira thresholds and categories that require investor approval versus farm owner/admin approval.
WhatsApp implementation	Confirm whether MVP should use WhatsApp Business API immediately or begin with an admin-reviewed manual forwarding/import workflow.
Offline use	Confirm if the farmer often works in low-connectivity areas and needs offline drafts or a mobile app in MVP.
Roles	Confirm whether the farmer, farm owner, investor, and finance approver can be the same person on small family farms.
Formal reports	Confirm required investor report format, branding, sign-off fields, and whether reports should be exportable as PDF, Excel, or both.
Data import	Confirm whether existing Excel, Word, PDF, and WhatsApp records should be imported into Farmwell for the pilot season.
